

For large spaces, the Solstice 8 combines great performance and a wide soundstage, faithfully reproducing the full emotional impact of recordings with naturalness and precision.

This 3-way floorstanding loudspeaker benefits from the key innovations developed for SOLSTICE, such as the new 'barrel-type' horn tweeter, optimisations to the midrange and woofer drivers, and the innovative base design, which combines several functions.

The Solstice 8 stands out for its ability to combine breadth and subtlety. Its two woofers, with their sleek design, give it a remarkable foundation capable of reproducing both the scale of a large orchestra and the energy and liveliness of contemporary music.

Within a wide and precise soundstage, the mid-to-high range naturally reveals both the harmonic richness of the instruments and the subtle nuances of the vocal range.

Thanks to its high dynamic range and dual terminals compatible with bi-wiring or bi-amping, the Solstice 8 is ideally suited to a system in a room of 15 to 50 m², whether for Hi-Fi use or as part of a home cinema setup.
